TRIVANDRUM | KOCHI | THRISSUR | CALICUT | KANNUR | BANGALORE | QATAR

## Who We Are?

Water Tech is Kerala's No. 1 brand offering mechanized cleaning and disinfection services for water storage tanks and water wells. Established in 2016 in Adoor, Pathanamthitta District, Kerala, we have expanded across Kerala with branches in Trivandrum, Ernakulam, Thrissur, Calicut, and Kannur. We are also expanding into Karnataka with upcoming branches in Bangalore and Mangalore. Our international operations have begun with our first branch in Doha, Qatar.

## What We Do?

We specialize in the cleaning and disinfection of water storage tanks, water wells, and ponds. Our services cater to homes, apartments, villas, government and commercial buildings, educational institutions, hospitals, malls, IT parks, factories, food processing units, hotels, resorts, and restaurants.

We collaborate with the PWD, CPWD, private contractors, and major facility management companies across India. Services are offered on-call or via annual maintenance contracts (AMC).

## Why Choose Water Tech?

- ▶ Kerala's leading tank cleaning brand with nearly 10 years of experience and over 1,000 corporate clients.
- ▶ Customer-centric approach ensuring high-quality service delivery and satisfaction.
- ▶ Continuously updated with the latest technologies and innovations.
- ▶ Open to feedback and committed to improvement.

## Our Mission

### *"Clean Water... Healthy Life"*

– Our mission is to ensure clean and safe water for everyone we serve. We are dedicated to time-bound and quality service, and our core focus is complete customer satisfaction.

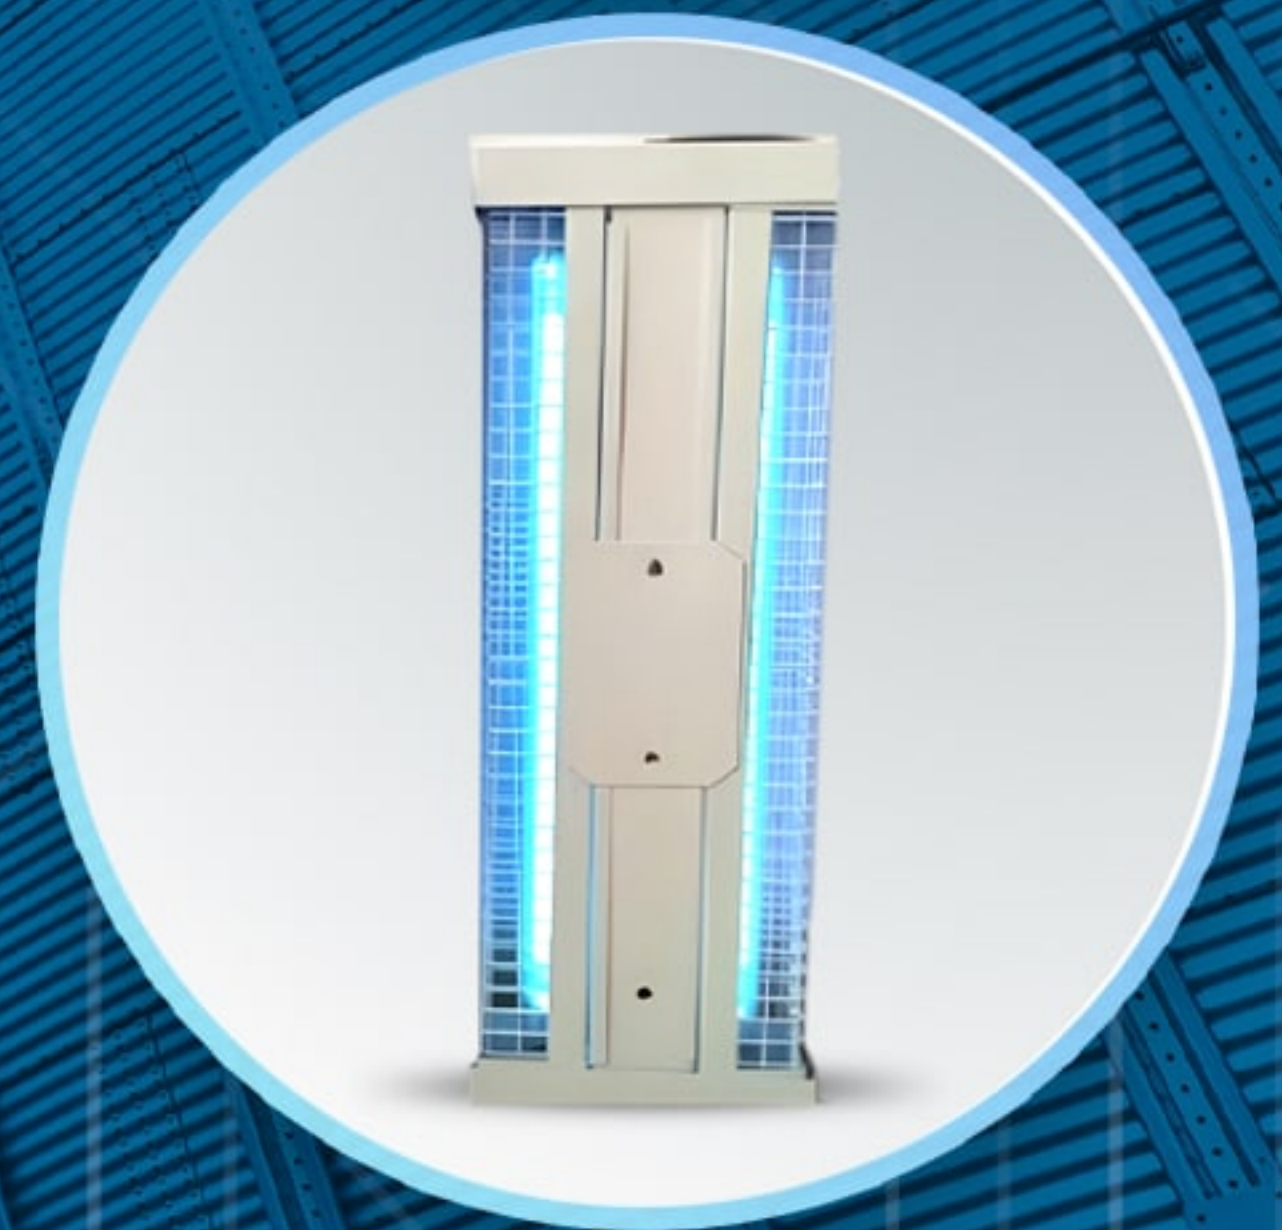

## Benefits Of Professional Cleaning

- ▶ **Healthier Water Quality :** Removes harmful bacteria, algae, and sediment to ensure safe water for daily use.
- ▶ **Expert Knowledge & Skilled Workforce :** Trained professionals use tailored techniques based on tank type and condition.
- ▶ **Advanced Equipment :** High-pressure jets, vacuum systems, dewatering pumps, and UV lamps allow effective and thorough cleaning.
- ▶ **Strict Safety Protocols :** Use of gas detectors, safety gear, oxygen meters; all staff are medically fit and insured.
- ▶ **Reduced Plumbing Risks :** Prevents clogging in pipes and taps, extending the life of your plumbing system.
- ▶ **Eco-Friendly Methods :** Uses biodegradable, non-toxic cleaning agents; no acids or phenyl are used.
- ▶ **Affordable & Convenient Packages :** AMC or on-call services with 24/7 availability and timely service reminders.

Steel / GRP / FRP Water Tanks | Sintex Water Tanks  
Overhead Water Tanks | Underground Water Tanks / Sumps  
Tower Tanks | Rainwater Tanks | Industrial Water Tanks  
RO Plant Tanks | Tanks in ship, boat and water tanker

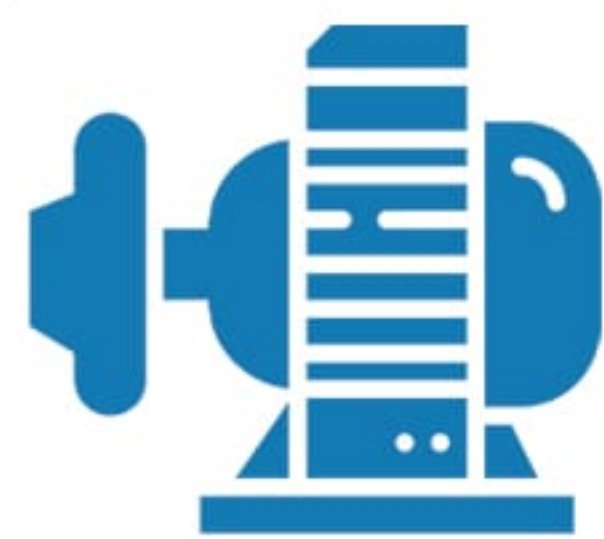

# Professional Water Tank Cleaning Service

Ensure clean and safe water for your home or business with our expert tank cleaning services. We use advanced equipment and eco-friendly techniques to eliminate dirt, bacteria, and algae. Regular cleaning improves water quality, prevents contamination, and extends the life of your water tanks.

**We Adopt a 6 Stage Process for Water Tank Cleaning and Disinfection Services as shown below.**

## Water Tank Cleaning Process

### Stage 1

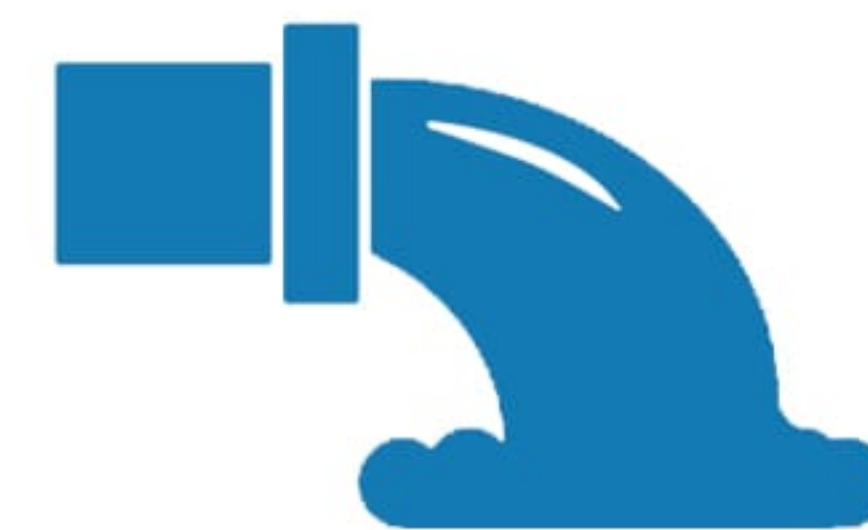

#### MECHANIZED DEWATERING

Typically achieved by draining the tank using multiple submersible pumps with a combined capacity of up to 100,000 LPH

**Note:** If necessary, the capacity can be increased up to 500,000 LPH.

### Stage 2

#### SLUDGE REMOVAL

Extracting mud, algae, and sediments using sludge pumps.

### Stage 4

#### VACUUM CLEANING

Removing remaining dirt with industrial wet and dry vacuum systems.

### Stage 3

#### HIGH PRESSURE CLEANING

Cleaning with 180-bar pressure jets (Kranzle & Bosch, Germany) using rotary and flat jets.

### Stage 5

#### ANTI BACTERIAL SPRAY

Applying sodium hypochlorite solution (6% chlorine as per ISI, 1L per 50,000L tank).

### Stage 6

#### ULTRAVIOLET RADIATION

Using UV lamps to eliminate airborne bacteria and ensure complete disinfection.

# Well & Pond Cleaning Service

Regular cleaning of wells and ponds is vital for ensuring access to clean and safe water. It helps prevent the spread of waterborne diseases by removing harmful bacteria, debris, and pollutants. Clean wells provide safe drinking water for communities, while clean ponds support agriculture, recharge groundwater, and sustain aquatic life. Maintaining these water sources also preserves environmental balance and promotes public health, making their care a shared responsibility.

## Well & Pond Cleaning Process

### Stage 1

#### DEWATERING

Using high-capacity submersible pumps (2HP, 100,000 LPH).

### Stage 2

#### SLUDGE REMOVAL

Clearing mud, algae, and debris using sludge pumps.

### Stage 4

#### HIGH-PRESSURE WASHING

Using 180-bar pressure jets for ring/concrete walls.

### Stage 3

#### REMOVAL OF PLANTS & WEEDS

Eliminating growth from sidewalls and nearby areas.

### Stage 5

#### ANTI BACTERIAL SPRAY

Sodium hypochlorite solution (6% chlorine) for disinfection.

# Water Filters & Water Treatment plants

Water Tech is one of Kerala's leading suppliers of water purification systems and treatment plants. We specialize in providing high-quality UV water purifiers, RO systems, and water filters to ensure you have access to clean, crystal-clear drinking water.

## Are You Concerned About The Water You Use?

- Is your water 100% safe?
- Is your current purifier effective against waterborne diseases?
- Are you facing issues like bad odor, rust stains, salt deposits, calcium scaling, or hair fall?

## We Have the Solution

## Our Services

- ⦿ Domestic Water Filters
- ⦿ Commercial Water Filters
